Subject: RE: PCS Street Bank SME "Interbank Transact Posting"

Hi Oscar, understood I didn't want to be the holdup.....

Adding Jean and Paula for their comments
Adding Cheryl and Wanda for awareness

Here is the requirement we heard during the meeting with State Street.....

For the conversion of the Boston DDA accounts the only identified impact to the existing **RTPS US instance** was handling the case where a payment will debit a Boston DDA account and go out Chips. **CHPS is only active for the NY Bank**. There needs to be a way to get the CHIPS pay through bank working when a Boston DDA account is debited and going out as Chips. Jessica made this recommendation to be fully vetted including:

- Configure an SSB MTS instance (don't really need UPF to test this aspect) with NY being the CHIPS pay through bank for Boston
- Setup the relevant cross bank clearing accounts
- (If necessary – needs to be vetted) convert the bank to do cross bank payments (single TRN model – Jean I think you said this was a global config flag in MTS)
- Process a cross-bank payment (similar to the attached example from a QE config) by manually entering one or repairing one in the Boston bank
- Setup rules to default the CHIPS payment method in the Boston Bank without manual intervention
- If all that works, we can share the config with State Street, and they should be all set

Subject: RE: PCS Street Bank SME "Interbank Transact Posting"

Hi Dolores,.
We would like to have this meeting to better understand the requirement. The bank told us that it was mentioned during last week's meeting with Matt (bank) and Jessica (ACI). We don't have any more information, and the bank is asking what the next steps should be.

I contacted Jessica O. and she suggested you. I copy , Amit [C] Ajay who is the architect of PCS team .

Thank you for your help and guidance.

Best Regards
